EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Anthony England on 9/28/06.

2. Please cancel claims 1-25 and add new claims 26-40 as attached.

Allowable Subject Matter

3. The proposal of assigning a prime number as a unique proxy value to each indirect loop index variable of a loop is a novel concept in the art.

The presently amended claims go on to state that these prime numbers are used to detect dependencies across loop iterations through the use of the fundamental theorem of arithmetic. Such is not only novel, but also considered by the examiner to be a breakthrough in the parallelization of loop code through memory disambiguation of indirect array accesses.

The closest application is that known in cryptography, wherein a unique prime number is assigned to a user as a "key". Multiple keys are multiplied together to form a "lock". If a lock is divisible by a requesting key, then access is granted to the protected data. Though the math is similar, after further consideration, the examiner

agrees with the applicant's remarks submitted 9/5/06 that this method is not analogous to the art of detecting loop dependencies.
